PROFESSIONAL EXPERIENCE

Amazon | San Diego, California

October 2023 - Present

DATA SCIENTIST (KINDLE - BOOKSTECH)

- [KDP](#) → Managed Publishing Prediction Model:
 - Led the end-to-end design, development, and deployment of a LightGBM model that generated 30-day transition probabilities for self-published titles representing \$14M+ in annual GMS.
 - Engineered 25+ behavioral, commercial, and engagement features across 3-24 month observation windows using data from 1.9M+ ebooks, 100B+ pages read, and 10M+ Kindle devices.
 - Achieved 0.878 title-level AUC-ROC on an out-of-time test period; the top 0.47% of risk-flagged titles captured 25% of all transitions, representing ~53× lift over the base rate.
 - Applied isotonic regression on a temporally separate calibration window, calibrating predicted probabilities to the observed base rate and reducing log loss by 17× (94%) vs. the uncalibrated model.
 - Analyzed feature behavior and model drivers to interpret predictions and identify key drivers of title conversion, enabling business development teams to prioritize author outreach and intervention.
- [E-reader Deprecation](#) Impact Analysis:
 - Owned end-to-end analysis of reading, borrowing, and download activity for Kindle Unlimited subscribers across 9 legacy device types and 12 marketplaces, from customer-ID decryption and multi-table joins through executive-level reporting.
 - Identified and resolved data-integrity issues involving inconsistent device join keys and device-sync events misclassified as downloads, preventing downstream errors in royalty calculations affecting 200K+ publishers and reading records for 2.7M customers.
- [Meshclaw - Conversational Analytics](#):
 - Built and maintained an AppSec-approved Slack analytics agent that retrieves prior analyses, validates field definitions against a curated schema, generates SQL, and requires human confirmation before execution.
 - Integrated 8 MCP tools and built a custom spreadsheet MCP to automate inputs for the monthly KDP Fund Doc and Finance Model, reducing manual preparation from several hours-days to under one hour.
- [Amazon Charts](#): Built scalable analytics pipelines supporting 40+ marketplaces, 20+ genres, multiple content formats, and millions of weekly transactions.

Zest Wealth Management, LLC | Hoboken, New Jersey

August 2021 - September 2023

DATA SCIENTIST (EQUITIES)

- As part of the founding data science team, developed and refined predictive models used to evaluate potential portfolio holdings across 50+ fund managers; model-selected portfolios outperformed historical S&P 500 performance by 760 bps in the firm's reported backtest.
- Automated recurring data extraction and preparation workflows with Python, eliminating approximately 10 hours of manual work per week.
- Built an interactive investment analytics dashboard used by 120+ private-sector clients to explore investment opportunities across 20+ geographies.

EDUCATION

M.S. in Computational Data Analytics - Georgia Institute of Technology, Atlanta, GA

B.S. in Mathematics - Ramapo College of New Jersey (Minors in Computer Science and Economics), Mahwah, NJ

CERTIFICATION

[AWS Certified Machine Learning Associate](#)

September 2022
